

# Are You Learning with a Growth Mindset?

---

Math students with a growth mindset believe that:

- Intelligence can grow as long as I continue to make an effort.
- Persevering through difficult practice develops grit and teaches you never to give up!
- The process of learning is more important than the outcome because you are a lifelong learner!
- Embracing challenging problems allows you to grow stronger!
- Making a mistake is no big deal because mistakes are opportunities to learn and grow.
- Failing only means that you don't understand something YET, and that more effort is needed.
- Being confident in your abilities and sharing your thinking helps you to learn and grow!
- Asking for help is never something to be afraid of!
- With hard work and the right mindset, anyone can be successful in math!
